Muhammad Mudassar Bhatti

Artificial Intelligence Engineer | Full-Stack AI Products | LLM Orchestration

+92 306 0717389 | mudasarbhatti191@gmail.com | LinkedIn | GitHub

Professional Summary

Artificial Intelligence Engineer and full-stack AI product developer with proven experience shipping state-of-the-art systems encompassing LLM workflows, computer vision networks, and edge deployments. Demonstrated capability to transform complex problem statements into robust production pipelines, optimizing everything from CNN architectures to dynamic RAG web applications and agentic automation tools.

Experience

Full Stack Developer *Mar 2026 – Sep 2026*
Well Track Health *Remote*

- Designed and built the company's public-facing website end-to-end, covering UI/UX, content structure, and deploy-ment.
- Developed an internal employee work-management dashboard/app enabling staff to track tasks, schedules, and daily workflows.
- Automated Medical Billing and Coding pipelines, streamlining claims processing and reducing manual data-entry work.

Business Management & Recruitment *Jun 2025 – Jan 2026*
Pearson IT Group (PITG) *Remote*

- Built automation for the daily international-recruitment workflow, cutting manual processing effort and accelerating candidate throughput end-to-end.
- Owned end-to-end hiring pipelines for technical and non-technical roles – sourcing, screening interviews, and candi-date tracking.
- Maintained structured hiring records and partnered with team leads to align staffing with project timelines and delivery milestones.

Freelance AI Engineer
Independent & Open Source

- **DocSentry – Keepin' It Real** (GitHub): Built an autonomous documentation-integrity agent that parses code diffs via tree-sitter ASTs, retrieves the relevant doc sections with BM25, and uses an LLM (Groq/Gemini/Ollama) to judge and flag when documentation contradicts code – opening a self-verified GitHub issue or fix PR, with a live static/React dashboard for monitoring runs.
- **Multi-Agent Radiology Report Analyzer** (GitHub): Designed an n8n-orchestrated multi-LLM pipeline (Gemini + local Ollama) that triages radiology/X-ray reports through three parallel specialist AI critiques and reconciles them into a single synthesized second opinion, with built-in PHI redaction and graceful degradation to prevent fabricated diagnoses.
- **Automatic Number Plate Recognition (ANPR)** (GitHub): Built a computer-vision pipeline combining YOLOv8 vehicle/plate detection, SORT multi-object tracking, and EasyOCR text extraction with custom character-correction logic to read license plates from live video streams.
- **Autonomous RAG Research Assistant** (GitHub): Engineered a local RAG research assistant using FastAPI, ChromaDB, and Ollama (Llama 3.2) that ingests multi-format papers via PyMuPDF/OCR to synthesize IEEE-compliant research papers with LaTeX math & inline citations.
- **Automated Real-Time 3D Object Scanner** (View Live | GitHub): Full Stack AI Engineer | 2025: Engineered a hardware-and-cloud architecture converting physical properties to production-ready .glb models utilizing OpenCV pipelines, PyQt6 interfaces, and connected Arduino boards.
- **Immersive Framework Architectures** (Live Demo): Developed the Unity-based "CyberEscapeGame" and a "Vuforia AR Framework," delivering hands-free multi-threaded experiences prioritizing advanced raycasting inter-faces and educational mechanics.

AI Engineer Intern *Jan 2026 – Feb 2026*
ZenithCraft *Remote*

- Orchestrated AI-driven interaction nodes for highly intelligent NPCs operating inside unified simulation structures using C# scripting.
- Architected dynamic state-machine workflows configuring continuous event-driven logic into seamlessly executing action loops.

Featured Products

ArcherSTEM View Live *Freelance Full-Stack Web Developer & Manager | 2026*

- Built and optimized a full-stack educational STEM publishing and eCommerce platform, engineering a custom inter-active multi-workbook bundle selector engine, 3D interactive flipbook previews, an automated diagnostic assessment funnel, and a tiered B2B institutional order pipeline.

Annals of Curiosity View Live *Freelance Full-Stack Web Developer & Manager | 2026*

- Built an academic publishing platform for student researchers, featuring a journals hub, an academia/courses section, a Bookery catalog, and a guided submission pipeline (AOC Press) that simplifies the path from idea to publication.

ScienceQuick View Live *Freelance Full-Stack Web Developer & Manager | 2025 – 2026*

- Built and maintain a content platform covering nutrition, hair, and holistic-health science, with category-organized publishing, an author system, and newsletter subscriber capture.

Automated FIFA Commentary View Live | GitHub *Full Stack AI Engineer | 2025*

- Built and shipped a real-time system combining YOLOv8 detection, ByteTrack tracking, GPT-4o Vision event classification, and OpenAI TTS to generate synchronized, broadcast-style AI football commentary from raw match footage.

Core Technical Skills

Agentic AI & LLM Sys-tems:	Ollama, LangChain, RAG Pipelines, ChromaDB, n8n, Groq/Gemini APIs, BM25 Re-trieval, Semantic Embeddings, Prompt Engineering
AI & Computer Vision:	PyTorch, Keras, OpenCV, CNNs, YOLOv8, SORT/ByteTrack Tracking, EasyOCR, Pre-dictive Modeling, PyMuPDF/OCR
Backend & Data:	Python, FastAPI, C#, C++, MongoDB, SQLite, Background Scheduling **Frontend &**
Immersive:	React, HTML, CSS, PyQt6, Unity, Vuforia AR, WordPress/Elementor, LaTeX **Cloud &**
Infrastructure:	Vercel, Firebase, Git, GitHub Actions, Docker, Arduino, Edge Deployments

Education

National University of Computer and Emerging Sciences (FAST-NUCES) Faisalabad, Pakistan
BS Artificial Intelligence 2027
